

WORLD HAPPENINGS
BRIEFLY TOLD

The Hamilton, Ont., Herald went out of existence with the March 31 issue after 47 unbroken years of activity.

Montagu Norman has been re-elected governor of the Bank of England. He has held the post since 1920.

Premier Hepburn says that he has reconsidered his announcement of last October that he would retire from office at the end of the current session of the Ontario legislature.

The Canadian National and Canadian Pacific Railways will save \$35,000 a year through unification of roundhouse facilities in Ottawa. Railway Minister Howe told the House of Commons.

Dr. W. H. Alexander, head of the classics department, University of Alberta, has received an appointment to lecture at Columbia University, New York, summer sessions in July and August.

Negotiation of a trade agreement with Soviet Russia "has been and still is under consideration," Prime Minister Mackenzie King told the House of Commons in answer to a question from Angus MacInnis (C.C.F., Vancouver East).

And now it's merry flights for horses. When eight teams ran out of feed 50 miles from Hudson, Ont., a passing plane was flagged down and the news taken to Hudson. Pilot Elton Cream then flew out with a load of hay.

Winings from lotteries do not come within the scope of the Income Tax Act, Dominion Tax Commissioner Paterson said at Toronto. A lottery or a sweepstake is a straight gamble," he said, "and gambling is not recognized as source of income."

Switzerland will soon build 40 military aeroplanes for defence purposes on her frontiers, the federal council announced. The cost will be financed by a special air fund of 5,100,000 francs (approximately \$1,667,700).

Discovery Of X-Ray

Röntgen Happened On Great Find 41 Years Ago

Like many other epoch-making discoveries in science, the discovery of X-rays was accidental. While investigating the passage of high-voltage electric currents through vacuum tubes, Wilhelm Röntgen, in 1895 happened upon this great find. Further research has resulted in the development of X-rays to a point, when to-day it is considered one of our major aids in the fight against the dread disease cancer. Its use in diagnosing ailments is well known and of extreme importance. Its application is being constantly extended.

But the X-ray has also found its place in industry. It is now possible to discover defects in various metals, by the use of the X-ray. This is of great importance when metal is used in construction subject to enormous pressure and strain.

At several of the most important ports of entry, the Customs Department uses the X-ray in searching for articles intended to be smuggled into the country. Then again, in the jewellery business X-rays are used to ascertain the value of gems, particularly pearls. Another curious use to which they are put is to obtain information as to the authenticity of paintings by the Old Masters.

It is believed that no X-ray apparatus is manufactured in Canada. According to the records, the imports of surgical and dental instruments, surgical needles, X-ray apparatus, microscopes and complete parts for all the foregoing, ran to about \$1,700,000 in 1934, coming mainly from the United Kingdom, United States and Germany.

Agricultural Research

Science May Create New Demands For Products Of The Farm

Agricultural research in the past has led to greater yields of improved farm products. The great problem of agriculture to-day is to discover new uses for these products, uses which will create new social values or partially replace the consumption of our exhaustible natural resources. Experience justifies belief that, along these lines, science may create new demands for farm products which will provide a constructive and permanent solution of the agricultural problem. This would be an infinitely better solution than the present emergency expedient of paying huge sums to induce farmers to raise less to plow under crops and slaughter stock, in order that the rest of us, who pay that bill, will also have to pay more for our food. I believe that no one, not even among its proponents, is enthusiastic about this destructive and temporary scheme to benefit agriculture. Dr. Karl I. Compton.

Ship Load By Aeroplane

By the time 300 tons of coal, now being assembled at the Foothills collieries, reaches Alberta, N.W.T., it will be worth almost its weight in gold. Packed in double-strength, 100-pound sacks, it will be taken north by aeroplane.

Famous Cathedral Menaced

Single Bomb Could Ruin All Its Irreplaceable Windows

The towers of the famous cathedral of Chartres, France, overlook a great military aviation field beyond the River Eure and the vista is disappearing.

The proximity of the cathedral and aerodrome worries inhabitants of the town. Throughout the land there is a consciousness of the importance of the cathedral of Chartres, comparable as an architectural monument to the Parthenon or St. Peter's. The airfield will be a target for enemy bombs when the war Europe fears actually materializes. All of the bombs may not fall on the aviation field, the body of the cathedral.

Even with the example of the bombardment of the cathedral of Rheims before them, inhabitants of Chartres are loath to believe that any aviator deliberately would drop a bomb on the cathedral itself, thus threatening the cathedral of Chartres, comparable as an architectural monument to the Parthenon or St. Peter's. The airfield will be a target for enemy bombs when the war Europe fears actually materializes. All of the bombs may not fall on the aviation field, the body of the cathedral.

Except for a few panes at Bourges, there are no 13th century glass in France except the priceless wealth constituted by the 24 windows of Chartres which still hold their old glass, whose beauty modern science has never been able to duplicate.

Experts estimate an ordinary bomb exploding 800 yards from the cathedral will shatter every one of those irreplaceable windows. The aviation field is only about 1,600 yards away. The chances are that any intensive bombardment of the airfield will blow in the cathedral's windows.

True To Tradition

Centenarians Publish Same Old Recipes For Long Life

It would be very refreshing if centenarians, when asked to what they attribute their longevity, would answer: "I have been spared by a kind Providence."

But the long-life "recipes" of three centenarians, published recently were true to tradition. One advocated plenty of eating and smoking; another, moderation of appetite; the third recommended "leaving the table hungry."

The diversity of these views is their condemnation and is further proof that there can be no single set of rules for longevity applicable to all.

Do what you think is good for you, and not what others have found to be good for them, is one of the best pieces of advice that can be given. Following such advice may not result in an abnormally long life, but should at least, make it reasonably enjoyable—and that's more important.—London Sunday Pictorial.

New Weather Forecaster

Micro Forecasting Tells What To Expect In Small Areas

Micro weather forecasting, a new science in meteorology, is being perfected at the California Institute of Technology. Micro forecasting tells what the weather will be in an area as small as a suburban district, a bathing beach, a park or a selected street corner.

Although originated in California, and designed to fit exacting needs of Hollywood film cameras, micro forecasting is the beginning of a universal science. It applies everywhere. It is based on air mass analysis, the knowledge of what is going on in the atmosphere several miles above the earth's surface.

Gave Strange Idea Of World

Greek Philosopher Credited With Drawing The First Map

The credit for drawing the first map goes to a Greek philosopher, Anaximander, who lived between 500 and 600 B.C.

Anaximander's map represented a strange idea of the world, known so little of it was then known, and like all men of his time, he had no idea that the world was a globe. He thought of it as completely flat, an expanse of water and land over which moved balls of fire. The earth itself he thought was stationary. He was among the earliest philosophers who attempted to conceive the origin of all things.

Queen Visits Famous Vaults

In a surprise visit to historic Adelphi Hotel in London, Queen Mary walked for 35 minutes through the cob-webbed vaults made famous by Dickens' "Pickwick Papers" in which until recently a million bottles of wine, much of it of rare vintage, were stored.

Man struggled for hundreds of years to find means of relieving himself of work. Out of that effort grew machinery. And now man finds himself out of a job. We greatly fear man is a "fathead." 2145

New Form Of Illumination

Synthetic Dusts Produce White Light As Sun Makes It

Powder light, a new form of illumination in which synthetic dusts glow with brightness exceeding electric lights, was made public for the first time at a meeting of the New York Electrical Society.

At the same time a laboratory approach to the sun itself, a mercury vapor light, was shown, its temperature 25,000 degrees, twice the sun's surface heat and described as the hottest ever created by man.

The powder light is produced in tubes about a foot long and the diameter of heavy walking canes. It is a cold glow, fluorescence, induced by invisible ultra-violet light produced electrically within the tube.

Brilliance of coloring never before seen, and efficiency even in white light twice that of ordinary electric lights were claimed for this discovery. Half a dozen of the new lights, in colors from green to pure white, were demonstrated by Dr. L. J. Butolph, research scientist of the General Electric Company at Nela Park, Cleveland.

There are hundreds of kinds of natural rock dusts which glow faintly—that is fluorescence—when invisible ultra-violet rays strike them. The new step of science is to create artificially dusts which glow with surpassing brightness, instead of the usual dull glow of nature.

The fluorescent colors of these dusts are brilliant and beautiful, as exotic as those of nature. By mixing several of them together the wizards of the new light have produced white light in the same way the sun makes it.

World Wheat Situation

Clearances From All Countries Improved During Last Month

During March there was a sharp improvement in the world movement of wheat, clearances from all countries being at the highest level since the beginning of 1936-37, although government policy regarding its disposal is not yet clear.

Present prospects suggest a surplus of such size that it could readily be added to domestic end-of-season stocks without embarrassment.

A Valuable Exhibit

King Edward Gives Diary Of War Service To Museum

The king has presented to the imperial war museum his own diary, maps and a variety of papers collected during his personal war service in Flanders.

Included is a letter from the late King to his son's commanding officer of the Grenadiers "that no honors or salaries to which the Prince of Wales is entitled to as the Prince of Wales shall be rendered by the battalion in which he is serving, or by any brigade to which his battalion may belong."

At present it is undecided whether these exhibits are to be open to general inspection.

Women Pilots

American Women Aviators Preparing For War Time Service

One of the outstanding women aviators of the United States, Mrs. Thompson "Patsy" Kenyon, arrived at Boston that she and several other women were preparing for wartime service, should they ever be needed. Mrs. Kenyon, who holds several flight records and has been a regular contestant in the national air races, said the women pilots did not expect to do any actual fighting. Rather, she added, they would pilot new planes wherever needed, transport wounded soldiers; carry dispatches and relieve male commercial pilots for fighting service.

Law School Examinations

New System Is Being Studied At Saskatchewan University

Plans for institution of a system of law school examinations as yet untried in Canada, are being studied by members of the faculty of law in the University of Saskatchewan. Dean F. C. Cronkite, K.C., announced. The new system will involve a "comprehensive, co-ordinating" examination in which the students will be expected to co-ordinate the knowledge gained in individual courses.

Has Three Kidneys

A case of unusual anatomical structure as rare as the "upside-down stomach" came to light in Detroit with the disclosure that Sanford Getz, Jr., 17 years old, of Brown City, Mich., has three kidneys. He is recovering from an operation. The discovery of an extra kidney was made by Dr. George C. Burr who recently operated on the youth.

AN EMPRESS ARRIVES HOME

Her holds rebouching rich treasures of the storied East, the Canadian Pacific liner "Empress of Japan" can be seen in the interesting picture above as she looms large at her dock on her arrival at Vancouver from the Philippines, China, Japan and Hawaii. 25,000 tons of strength and beauty, the "Empress" seems to dwarf the graceful pile of the Marine Building, one of Vancouver's largest buildings, in the background.

Canadian Nickel Best

Metal Mined In United States 75 Per Cent. Copper

The Canadian Science News Service says since the date, 55 years ago, when the first nickel coin was struck, 44,000,000 pounds of such currency have been minted with the bulk of the required metal coming from the ore deposits of the Sudbury Basin in Ontario.

The Free State of Danzig is now putting into circulation the first of its new five and ten golden pieces made from nickel. Danzig recently introduced half and one golden coins of the Canadian metal. This raises to twenty-seven nations the total of countries using pure nickel coinage in addition to many others where currency, struck from alloys including nickel, is in circulation. Curiously, with Canadian nickel coming into increasing industrial use all over the world, neither Great Britain or the United States, both leading industrial nations, have issued pure nickel coins. The Canadian five-cent piece, in addition to its value as a coin, is a good example of the white metal for which the Dominion is famous. The so-called "nickel" in the United States is actually only one-quarter nickel and 75 per cent. copper. Metallurgically speaking, it would be more correct to call it a copper.

Glass To Cut Glass

Germany Has Produced Substance Which Is Extra Hard

A glass which will cut glass has been perfected at the Zeiss works of Jena, Germany. It is fused zirconium oxide glass, quite transparent, and next in hardness to carborundum. The fusing of this substance is brought about by the aid of a sun furnace invented at the works. A plane mirror is made to follow the course of the sun, gathering its rays and reflecting them into a 100-inch searchlight mirror. There the rays are focused to a focus, and in the sun furnace the temperature is raised to over 5,600 degrees Fahrenheit. Higher temperatures may be reached, but this is sufficient to melt metals and to produce the glass which when cooled has extraordinary hardness.

Swagger Suit That's Easy To Knit

PATTERN 5562

PRIZED POSSESSION!—this swagger suit, to knit, and wear and revel in, from this season forth! It's easy to make, too, for plain skirt and sweater jacket are done mainly in stockinette stitch, with a simple waffle stitch for cuffs and yoke. You'll love it in colorful, Germantown wool. In pattern 5562 you will find complete instructions for making the swagger suit shown in sizes 16-18 and 38-40; an illustration of it and of all the stitches needed; material requirements. To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Publishing Union, 375 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Traveling Museums

Would Place Advantages Before School Children Of Rural Areas

The little girl who glanced around a museum and said: "Mother, why this is a dead circus," is a concern of J. B. Woodworth, C.C.F. leader, who advocates that the wealth of educational matter in the national museum in Ottawa should be brought within the reach of more Canadians.

"We have other circuses travelling the country; why should we not have small travelling museum units sent to outlying districts and to small country schools at present lacking any such advantages?" Mr. Woodworth asks. "There could be farmers' museums, school museums, children's museums, scientific and research museums."

A museum car attached to regular trains and left at sidings so that the country folk might visit, is one suggestion he has made to museum authorities and one he intends to place before the House of Commons should the occasion present itself.

"Why should taxpayers throughout the country contribute to this institution so full of interest when only a very few people can actually take advantage of all it offers. If the people cannot go to the museum, then the museum should be in some way sent to the people," Mr. Woodworth said.

"I know what it would mean to a teacher in a small rural school to be able to show children who have not even maps or pictures in their schoolroom, the bows and arrows of the Indians, the miniature models of ships and canoes. Children in prairie villages often have never seen a large body of water. I had difficulty in describing a sea or a lake and could only do so by telling them to imagine a pond that extended for miles. Think what it would mean to those children to be able to handle pieces of quartz from mines, learn with illustrations about our great forests, our fisheries and game."

It would cost the government little to place all these really needed advantages at the service of those to whom they would mean so much. Branch banks, university extension lectures and travelling libraries grew out of a similar cause. We should find some way of liquidating these frozen assets."

The King Takes A Walk

Edward VIII. Will Not Be Governed By Old Customs

Nobody ever saw a photograph of King George walking in the streets, nor of King Edward or Queen Victoria.

The other day King Edward VIII. walked out of Buckingham Palace with a friend and proceeded up the Mall about half a mile to a meeting at Buckingham Gate. A few working men gave a timid cheer and he tipped his derby to them.

Only once, it is reported, did King George venture to walk out of the Palace. About 100 yards up the Mall from the marble gates, is the huge and beautiful marble memorial to Queen Victoria. The King had driven past it probably thousands of times, and he said one day he would like to have a close look at it. So he walked out and looked.

Queen Victoria once expressed a desire to ride in a street car. But, of course, she never could. There are few things the common people do that King Edward has not done, and if there is anything he wants to do, he'll just do it, King or no King.

Easy Way To Learn

Punch And Judy Shows Teach German Children English And French

English and French is being taught to German children "without tears" by the use of Punch and Judy shows. The puppets are made to up-braid each other in the foreign language. Martha Hoffschlager, writing in the National Socialist Teachers Association, says that in schools where this experiment has been tried out, children enter so much into the spirit of the game that when Mr. Punch turns to the audience asking questions in the foreign language they readily answer.

Changed Order

Says Machine Age Will Eventually Take World Control

Henry Ford, combining a winter vacation in Georgia, with research on a new automobile motor, predicted that the machine age eventually "will take control of the world from the financiers."

The multi-millionaire manufacturer said the changed order would end the ability of the wealthy to "rule the universe" and that independence would come to the individuals who develop the machinery.

Not What He Thought

The new prisoner had been in his cell when he began to realize that he was a disappointed man.

"I say, warden," he said, on the fourth day, "when does the fun begin?"

"Fun?" echoed the warden. "What fun? You don't expect fun in jail?"

The prisoner looked amazed. "Lumme," he exclaimed; "then what did the judge mean when 'e said I was to come in 'ere for the time of my life?"

YOUR GARDEN

Early Spring is generally considered the most favourable season for planting nursery stock. Under the latter heading comes a wide variety of plants, including rose bushes, shrubs, fruit, and ornamental trees, perennial flower plants, vines, raspberry bushes, asparagus, strawberry plants and a host of other permanent things. In purchasing such material, authorities emphasize the importance of securing fresh stock from a reliable Canadian source. Roots and stems should be pliable and moist and if there is any upper growth as in the case of shrubs and trees, there should be evidence of live green buds. On receipt the plants should be immediately set outside in their permanent quarters, if this is possible, but otherwise buried lightly in a trench with the soil formed about the roots, or if the ground is frozen the stock should be stored in a cool, moist place so that there is no chance of its drying out.

Most people realize that all vegetables deteriorate in storage. The early potatoes are always tastier than those coming out of frosty cellars this month. The former taste better because they are not ripe. To get this quality in all vegetables experienced gardeners spread their seedling season over a period of weeks. They realize that vegetables deteriorate in the garden just as they do in storage and so they always have a few feet of lettuce and a row or two of minor crops coming and practically everything else coming on rather than the whole gardening maturing at one time. There is nothing to equal fresh peas, tender and juicy, when taken right out of the garden and put in the pot, but if the same peas are left on the vines for three or four days after they are ready, the best flavour has gone. To have a succession of really tender vegetables, one is advised to make at least three sowings of the one packet, at intervals of from ten days to two weeks and to still further extend the season by using early, medium and late varieties.

Seed catalogues will prove mines of information for the average gardener. This publication is thoroughly reliable and is illustrated with actual photographs. These catalogues put before the gardener more than a mere mention of the many flowers and vegetables available in Canada. They specify important points such as time of planting, resistance or lack of resistance to frost, height, colour, season of blooming, whether the flower and also the suitability of the flower for cutting purposes. All of these points should be taken into consideration in planning a real garden, authorities state, as only with such knowledge can a comprehensive and successful scheme be worked out. Little plants must not be hidden by tall things, and the height of the plants should be in the garden as possible from early June on. The most satisfactory planing, also, will give plenty of material for bouquets and should be some plants noted for their scent. A good flower garden is similar to a good library in that it should show the individual preferences of the owner, and there will be something to fit every occasion.

State Steel Mills

Yugoslavia Purchases Machinery From Krupp Company

An important order for rolling mill machinery, smelters and other appliances of the metallurgical industry was placed recently with the Krupp company by the Yugoslav government, authentic quarters disclosed at Belgrade.

This machinery, which will enable Yugoslavia to smelt its own iron ore, plentiful in the country, and manufacture steel, is destined for the Zenitza steel mills, in Bosnia, now the property of the state. Hitherto, Yugoslavian mills only produced one-fourth of the steel needed by the country, three-fourths of its ore being exported to mills abroad and reimported as the finished product.

Although not exactly war material, the order to Krupp is destined for national defence, enabling Yugoslavia to manufacture its own guns and ammunition.

Will Probe Accidents

Britain To Conduct New Crusade In Public Safety

The most exhaustive analysis of road accidents ever made in Great Britain will be begun in a new crusade to increase public safety.

It will be the latest step in a campaign to decrease accidents which, Leslie Hore Belisha, minister of transport, told the House of Commons, caused more than 2,500,000 casualties in the reign of the late King George.

This figure, he said, is "comparable with the aggregate of all killed and wounded in the forces in the United Kingdom in the Great War." Hore Belisha, whose campaign already has met with some success, announced the forthcoming analysis would involve study of about 200,000 separate occurrences throughout the country. Every road accident involving either death or injury will be analyzed in a search for the causes and possible remedies.

Teacher: Now I want you to notice how clean James's hands always are. James, tell the class how it is that you keep your hands so nice?"

James: Ma makes me wash the dishes every morning.

The University of Kentucky has a "How to Study" Class.

FLEMING'S FOLLY

-BY- LAWRENCE A. KEATING

SYNOPSIS

The story opens with Link Fleming addressing a meeting of Boom County cattlemen, called together with the object of forming an irrigation company.

The meeting terminates, but Buzz Hamilton and his sister, Helen, Link Fleming stay behind and Helen asks Fleming questions about his irrigation plan. This angers Buzz, who accuses Fleming of trying to influence his sister and, as he thinks, ruin the "spread". Buzz shoots at Fleming, but an uncontrollable fit of anger, but Buster Townsend, Link's foreman, is shot in the stomach, and Fleming is unhurt. Buzz is arrested and sentenced to three years imprisonment.

Helen and Fleming form a partnership to provide irrigation for their own properties.

Fleming goes home and studies the plans drawn by Townsend to learn whether they could be adapted to a smaller scheme suitable for his and Helen's land, and is satisfied it could be done. Feeling cold, he lights the fire and there is an explosion that wrecks the house, burns him and plans and renders Link unconscious. He is rescued from the blaze by an employee.

Helen and Link ride to Rawhide for supplies and to obtain funds to carry out the dam project. They meet Roper, who greets Helen and offers to shop with her. Link goes to see the Sheriff, who tells him Buzz Hamilton has been paroled, and would arrive on the incoming stage, but that he thinks Link has made a mistake in getting Buzz released.

Buzz Hamilton arrives back in Rawhide while Fleming and Helen are in the bank getting a loan for payment of wages for work on the dam. Roper Kigo and Jackpot Mell meet him and he goes into the saloon with them. By the time his sister and Link come from the bank, Buzz has had several drinks. Roper has distorted the facts concerning the dam proposal to Buzz, making it appear that Link was trying to ruin him. Buzz, inflamed with liquor and anger, tries to throttle Fleming, but is thrown to the floor. Then Helen appears and tells Fleming she has been robbed of the \$500 they had obtained from the bank.

(Now Go On With The Story)

CHAPTER X.—Continued

"You can't fool me, Link Fleming!" The words spilled in a torrent from his quivering lips. "I got the truth about you! I got it right. Did you think there wasn't anybody in town man enough to put me wise?"

"Why, Buzz?" the girl pleaded. "What do you mean?"

He turned on her almost savagely. "You ought to see through it but you don't. You've got control of our spread. I have the right to it. I've pardoned that what Kigo wanted to get for me. Yes, you'd see through this scheme too, if you weren't so blind in love he's got you buffaloed! Every time he holds your hand—"

"That's enough, Hamilton!"

Shamed so that her countenance fairly glowed with blushes, Helen looked away, uncertain how to deal with her drink-roused brother parrotting sentiments obviously not original with him. "Please, let's not quarrel this hour we're together again! After I've prayed for you, and hoped and—"

"That's all right," he growled. "But I can't see how you ever fell for Fleming's lingo about that dam. There isn't a chance in the county him faith in it. Soak Tonney said it wasn't any good, didn't he? You're shore to break our spread—trying to irrigate a heap of sand!"

He pointed ahead, toward the foothills of the Captain Range, a few miles away, topped by jagged peaks rising into serene blue sky. "The wasteland'll never be anything, no matter how much money you pour into it," Buzz declared emphatically. "Water'll twenty cent ground!"

Link stared where he indicated but scarcely saw the yellowish expanse beyond low-lying buildings of the Triple H Ranch, on whose property they now rode. He was pondering how to win Hamilton's confidence, and bitterly reproached himself for having knocked the bottle away. Yet he knew sight of Buzz drinking was like a knife turned in Helen's flesh; he had been forced to the move by the utter misery in her soft eyes.

"Helen, old-timer," he said in a controlled tone. "I don't think it'll be so bad after all. Silver Creek's only thirty-two feet across where we're damming it. There are rock slides for a mile back that'll hold an awful lot of water. Of course, we'd cut a cut-off while the dam's being laid, and we're digging irrigation ditches through that wasteland."

"We've got a good engineer in charge," he went on, watching hopefully for even a modicum of interest. "His name's McLondon, and he's built a lot of dams. It's like this," he continued. "I'm standing seventeen-twenty-sixths of the cost, on account of having seventeen hundred acres to Helen's yore nine hundred."

"I'll admit, we're hard pressed for money, Buzz. Had to raise first mortgages on our spreads, and we gave a note for that eight hundred that was just stolen. But what if Finkler do call it Fleming's Folly? It's a couple of days they change their tune. Because the Silver Creek Dam will be workin' mighty quick now. Nothing can stop

us—we're going to increase the value of the Triple H and Star Loop at least three hundred per cent. If you ask me, a thousand per cent!"

Ending, he was conscious of Helen's eyes upon him, wide and shining with enthusiasm. Link smiled at her, then glanced at Buzz. His upper lip was curling.

"Yeah?"

"It carried plainer than words the keep-set intractability of the man. It was as if he had called Link a liar, as if he had sneered: 'Till never work, and even if it does, I won't believe it!'"

The partners exchanged discouraged looks. Buzz Hamilton's homecoming was not a success. If anything, he was an added obstacle, a thorn in their path, where already there were so many.

CHAPTER XI.

Drawing rein in the Triple H yard, the riders saw two men in nondescript garb seated on the edge of the ranch house stoop, looking as if they had waited there some time. The pair rose with deliberation and ambled forward while Link and Helen exchanged questioning glances.

"Howdy, boys," Fleming greeted, uneasily aware of a truculent note in their bearing. "Anything wrong at the dam?"

One of the men, his leathery face thickly blacked with beard, spoke up. "There's plenty wrong at the dam. We want our wages and we ain't doin' another tap of work till we get 'em!"

"Ain't you paid us twice a month, didn't yuh?" growled the other. "We're weeks behind now. How about it?"

Link felt Helen and Buzz watching him and knew the girl was angry, while young Hamilton's countenance wore renewed defiance. He forced a grin and gestured placatingly. "Boys, you don't need to worry about that money."

"Yore Orillas turned to the girl. 'Yore pardners with Fleming, Miss. How about it?'"

"I'm sure you will be paid," she answered promptly. "But Mr. Fleming and I are rather hard pressed right now, and—er—it may be necessary for you to give us a little more time."

They exchanged significant looks. "We know why yuh went to town this mornin', Fleming. Somebody's gonna throw yuh into bankruptcy, the cement guys or somebody. Yore creditors are hollerin' for cash same as us guys workin' on yore foot dam. But we found out wages get paid first, so there ain't gonna be any way for yuh to wiggle outa that!"

Surprise flooded his lean countenance. "Somebody's fooling you, boys. I don't know anything about creditors throwin' us into bankruptcy." He turned to Helen. "Do you?"

She shook her head. "Of course not. The dam will be finished."

"An to say yuh didn't go to Rawhide to fix things?" demanded Orillas with suspicion.

"Tug, Miss Hamilton and I went to Rawhide—to meet Buzz. He was just paroled to me, and that little affair last fall is all forgotten. I wish," he added as an idea struck him, "that yuh'd spread the word around. Buzz has paid his debt and he's making a clean start. Jack, I reckon if your brother's come home after—being away—you'd go meet him, wouldn't you? That's what Miss Hamilton did, and I went along."

Helen flashed him a grateful look. Even the ex-convict seemed impressed with Link's words, and it seemed that Buzz straightened and threw his shoulders back.

"But how about wages?" insisted Kevin. "When do we get paid? We ain't workin' for our health!"

"Of course not. I'll tell you right out, we're pressed for cash, just like Miss Hamilton said. We make no secret of it. But there are arrangements under way to pay you, and if they shouldn't go through I'll figure out something else. If you go back on us now, we might go broke. Then I reckon you'd be out of charity."

"But if you stick," he proceeded, watching their reactions, "I'll give you my word you'll get cash as soon as possible. And backin' me up, Miss Hamilton'll tell you the same thing."

Helen nodded, her eyes fixed hopefully on their grim faces. The pair shifted weight and pursed their lips. Finally Tug Orillas turned half away. "We got to find out what the others say that's waitin' at yore spread. We come over here to be shore there wa'n't no fast ones pulled on us."

This information struck fresh apprehension to his heart, and looking out of the corners of his eyes at Helen, he saw that worry possessed her as well as they. They concealed their feelings and smiled tolerantly as if the matter would soon be adjusted.

"I'll ride over to the ranch with you, boys," Link announced. "Where's your house?"

"They went to fetch them behind the ranch house, and it did not escape Fleming that Kevin and Orillas

If You Eat Starches Meats, Sweets Read This

They're All Necessary Foods—But All Acid—Fleming, Hence Most of Us Have "Acid Stomach" At Times. Easy Now to Relieve.

Doctors say that much of the so-called "indigestion," from which so many of us suffer, is really acid indigestion, brought about by too many acid-forming foods in our modern diet. And that there is now a way to relieve this... often in minutes.

Simply take Phillips' Milk of Magnesia after meals. Almost immediately this acts to neutralize the stomach acidity that brings on your trouble. You "forget you have a stomach."

Also in Tablet Form: Phillips' Milk of Magnesia Tablets are now on sale at all drug stores. The equivalent of the liquid form.

MADE IN CANADA

had hidden their mounts from view of anyone approaching from Rawhide. This indicated, of course, that they actually feared Link and Helen would not have come to the Triple H had they known of the reception committee.

"Where'd Buzz go?" he asked in a low tone, looking around.

A troubled expression came to her face. "He went inside. And, Link, I just know he has another bottle of whisky."

"They stood a moment considering. 'Well,' he decided, 'I reckon I better go talk to him.'"

But she touched his arm in restraint. "I know how Buzz is, very irritable when he's been drinking. Better if we let him alone. I hope," she added bravely, glancing toward the mountains, "he hasn't started to—"

"To be like he was before."

"You know," Helen went on in a tone of wistful regret, "Buzz was never like the rest of us. Father said when he was dying that I should be careful how I treated him. Buzz—oh, he has temptations we don't feel. He can't resist gambling and drinking. It will be hard to keep him out of bad company."

The fervor of her anxiety carried her straight to the Star Loop corner heart. Fleming wanted to comfort her, to drive away every little grope that marred the raty brow showing under her Stetson. He gazed at Helen with eyes intense with affection, and the slender hand on his arm exerted pressure that proved she understood and was grateful.

"You're enough to worry about. Leave Buzz to me. How will you like the mad party?"

He shrugged his shoulders. "Reckon they'll go back to work all right. But gosh, that eight hundred being gone makes things hard. You didn't even get a good look at the home-"

"No. The bandana covered his whole face. All I have for a clue is that leather cuff I turned over to the sheriff."

(To Be Continued)

Memorial Album Issued

Gramophone Records Comprise All Of Late King's Speeches

The familiar voice of King George the Fifth is preserved for all time in a memorial album of 13 records issued by the Gramophone Company.

Each record, as well as the album, can be bought separately. The records comprise all King George's speeches recorded by His Master's Voice, with a short address made by Queen Mary some years ago, and the tribute broadcast by Mr. Baldwin on January 21, the night after the King died. King George's own speeches range over 12 years, ending with his last Christmas Day broadcast in tones whose huskiness should remind of listeners with a sense of impending trouble. Especially touching is his Silver Jubilee message on May 6, 1935, on the other side of which is a realistic record of the great drive to St. Paul's Cathedral, with the cheers, the clank of the escort and even the sound of carriage-wheels mingling with the strains of the National Anthem.

Name Of Small Village

"Tendant manager sought for restaurant, with living quarters adjoining, at the railway station of Great Britain." So ran a recent advertisement in a German newspaper. The Great Britain mentioned is a village in East Prussia with a population of 230. A neighboring hamlet called Little Britain has only 30 inhabitants.

Japanese boarding houses are required to place a list of the names of their boarders outside.

King Of Longevity

Mohammedan Indian Emigrated To West Indies In 1811

After seeing 133 years fleet by in his lifetime, Charles Champion, a Mohammedan Indian who emigrated to the West Indies in 1811 at the age of eight, does not want to live more than five months longer.

Since the death in June, 1934, of the aged Turk, Zaro Agha who said he was 160, Champion, true to his name, claims to be the King of Longevity, the oldest man in the world.

One of the first settlers on the island of Trinidad, the patriarch attributes his longevity to moderation in eating, sufficient sleep, and abstinence from alcohol. But now he feels his long life is nearly the end he almost eagerly awaits. He says he has earned "the last laugh."

A living history of the growth of the colony of Trinidad, Champion has a couple of crumbling and faded immigration certificates that he produced as proof of his great age. They show he migrated from Calcutta to Grenada on the sailing ship Fulwood in 1811 when he was eight years of age.

He worked 30 years on sugar plantations in Grenada with his parents before going to Trinidad in a battered old inter-island trading ship which landed him on the island near what is now Port of Spain.

He believes in the old maxim of "early to bed and early to rise," which to him means sleeping from six o'clock in the evening until four in the morning. To this day, he takes a four o'clock bath in a cool spring near his home every morning.

Until recently he never partook of alcohol. Now he has the occasional drink of wine or light spirits as a stimulant. He has been bothered, for the last 30 or so years—since he turned the century mark—by not having any teeth.

His regular habits have kept him in remarkable condition and he still does not know the meaning of fatigue.

Had Its Advantages

Slower Travelling Found Drivers Alive At End Of Day

Only 30 years ago six miles an hour on a highway behind a horse considered good going. Of course, the cruising radius in such a vehicle was only about 25 miles a day at the maximum. Ten years later 30 miles an hour was considered a fair clip. And so on up to 90.

Admitted, that if the tempo of all the surrounding life is accelerated, 40 miles an hour in 1936 may be no faster in "relativity" than was six-and-a-half in 1906; but it may have the above-cited advantage over 90-miles-an-hour that the motorists are still alive at the end of the day.

The point of the matter is that time has not grown 10 times more precious in 30 years; whereas life has not ceased to be sweet. If it is not sweet to the speeder, it may still be sweet to others on the same road.

The Contributing Cause

Automobile Blamed For Failing Out In Hotel Patronage

The extent to which hotels everywhere are going to receive old-time patronage is generally recognized. In fact in most centres across the line the majority of them are now in receivership hands. The auto is generally regarded as the contributing cause, roadside camps and private homes receiving the bulk of the travelling patronage and creating the habit of looking for less expensive accommodation. In Ottawa, also, it is recorded that only about fifty members are making the lead hotel their headquarters for the present session, the other M.P.'s taking apartments, or in some instances, lodging at the Y.M.C.A.—Brantford Examiner.

Blame It On Color

Bridge players who overlook their hands can blame it upon the color of the playing cards. Dr. John J. O'Neill, president of the Massachusetts Society of Ophthalmologists, has declared the red color in hearts and diamonds excites the fighting spirit. He suggested changing the red to a deep yellow-green, which is restful and relaxing.

Sometimes a prominent citizen is one who held on to property while others built a city around it.

Purity Flour means real economy. It goes further. Rich in nourishing gluten, it makes bread that rises right up out of the pans—and the most delicious biscuits, cakes, pies and flaky pastry ever baked!

PURITY FLOUR

Best for all your Baking

Costly Marble Bath

France Buys Tub Installed For King Louis In 1673

The 263 year old marble bathtub of King Louis XIV. of France has been bought by the ministry of fine arts and returned to the palace at Versailles.

Originally installed in the palace in 1673 when the monarch was 25, the bath cost 9,000 pounds an enormous amount in those days according to records carefully kept at Versailles throughout generations.

The bath is made from a single block of marble, reddish violet in tone and veined with creamy white. In Octagonal in shape, the bath weighs 10 tons and it measures 10 feet 6 inches across. To aid the royal bather, four little steps and a ledge were cut from inside of the tub.

At the top of the steps were two holes through which the water was originally. It is believed these holes were covered by bronze or gold dolphins' heads in the style of that period, but these ornaments have disappeared.

When Louis XIV. died in 1715, the bathrooms at the palace were rearranged. This marble tub was not moved because of its great weight, but was filled with sand and left under a floor. In 1750 there were more alterations at the palace and when the floor was taken up the tub was discovered.

Louis XV., great-grandson of Louis XIV., presented the marble tub to his favorite, Mme. de Pompadour, who had it removed to the chateau, her country house. At this time it was placed in the midst of an ornamental flower garden.

It is not known what became of the marble bath after the death of Mme. de Pompadour, but some time later it came into possession of Anne-Pierre de Montesquiou, French man of letters, who lived at the Paris suburb, Le Vesinet. Many years later, still at Le Vesinet, it was found on the estate of the Countess Canali.

Pooling Their Resources

Armless Student And One Without Sight Working Together

Thomas Howard Overton, 31, who is blind, and Stanley A. Kasprzyk, 32, who is armless, are working together in law on a co-operative basis. They have pooled their physical resources, it was disclosed when Overton, announced at the Chicago-Cent College of Law as the high ranking scholar in the freshman class of 175, insisted that Kasprzyk deserved some of the credit. Kasprzyk, he said, was his eyes, and he was Kasprzyk's arms. They met on their first day in school when the armless student guided his blind classmate down a flight of steps. Overton could carry books, but not read them. Kasprzyk could read, but not carry books. The logical association developed.

"I take notes in class with a pencil on a Braille form board," he said. "Out of class Stanley reads to me and I transcribe my notes on a typewriter for him. For each of us it is just a matter of working harder to overcome a physical handicap."

Overton, whose home is at Swanton, N.Y., lost his sight when he was 20. Two accidents deprived Kasprzyk, a Chicagoan, of his arms. He lost one under a train in a railroad yard and the other four years ago in an automobile wreck.

Carries More Tonnage

The tonnage passing through the Detroit river, which connects Lake Erie and Lake St. Clair, exceeds in volume that passing through any other river in the world. Yet the Detroit river is closed to navigation during the winter and part of the spring.

Little Helps For This Week

Blessed are the peacemakers; for they shall be called the children of God. Matthew 5:9.

Grant us Thy peace, down from Thy presence falling. As on the thirsty earth cool night-dews sweet; Grant us Thy peace, to Thy pure paths recalling. From devious ways, our worn and wandering feet.

Have you ever thought seriously of the blessing given to the peacemaker? People are always expecting to get peace in heaven, but whatever peace they get there will be ready-made. Whatever making of peace they can be blessed for must be on the earth here; not the taking of arms against him, but the building of nests amongst its sons of trouble. Difficult enough we think, but very few of us really try. We complain of the want of many things, we want liberty, amusement, money, and which of us knows that he wants peace? We should ask God, whose chosen reward is the gift of peace, to pour it into our souls so that everything discordant may utterly vanish, and all that makes for peace would be sweet to us forever.

A Novel Burglar Trap

Not Only Protects Property But Also Catches Thief

A novel "burglar trap" which not only makes it impossible to rob any safe in which it is fitted but also catches the thief has been invented by a Budapest policeman. The device, which has been patented, is extremely simple. A special container in which is a quantity of a secret gas is fitted inside the safe. In such a manner that when the burglar's tool pierces the safe it also pierces the gas container. The gas, which is in a compressed form, escapes out and overcomes the thief. A few sniffs of the gas is enough to make any burglar fall asleep for several hours. The attempted theft is certain to have been discovered before he awakes and he can thus be easily arrested. The policeman-inventor, Joseph Woldram, has already received many enquiries from safe manufacturers in Hungary and abroad.

The Royal Signature

King Edward Still Writes Name With Familiar Flair

King Edward, who has a new signature now that he's the monarch, has swung into writing his new name without any difficulty. "I'm really just an improvisation on the old one."

When he was the Prince of Wales he signed documents "Edward P." Now it's "Edward R. L." Before becoming sovereign he always wrote the "R" after his name with a full loop. Now he adds a straight downward stroke to form an "R" and affixes a perpendicular line for the "L."

He still adheres to his familiar final flourish from the ending of the "d" of his name, the flourish running the length of the name.

It is claimed that geologists have proved less than two per cent of the potential oil-bearing areas of the United States.

Lake Baikal, in central Asia, is believed to be the only land-locked water in the world containing seals.

An Interesting Antique

Old Veterinary Book Was Printed In London In 1755

Lovers of antiques and old editions would be delighted to examine an ancient veterinary book, owned by the Talbot family, living north of Orkney, Shetland. It is a pocket edition five inches by eight inches, with leather binding. The paper is parchment-like, creamed by age.

The peculiar type and queer spelling proves its extreme age.

This book was given to the great grandfather of this family by Sargent Pratt while he resided in northern Ireland. It was brought to Canada 55 years ago.

On the first page is "Printed in London for A. Millar in the Strand MDCCLV. (1755)."

"Why does a woman say she's been shopping when she hasn't bought a thing?" asked the man who was a stickler on speech.

"Why does a man say he's been fishing when he hasn't caught anything?" replied the lady.

INDIGESTION, GAS?

WHEN you feel down, or your stomach gives trouble, with gas or "sour" rashes, try that well-known tonic, Dr. Pierce's Golden Medical Discovery. Read what Mrs. Margie Beatty of 401 E. Main St., Welland, Ont., said: "I suffered considerably from indigestion and gas and my food lay so heavy in my stomach. I would become tired and felt very uncomfortable after eating. I used only one bottle of Dr. Pierce's Golden Medical Discovery and it gave me free relief from the stomach distress. I felt ever so much better after its use."

Buy now of your neighborhood druggist. New size, 160c. Liquid \$1.50 and \$1.35.

regulations, among them the dry cleaners.

According to the Alberta Gazette, the retail license fees are as follows: Owner or manager and up to two clerks, \$2; owner or manager and up to five clerks, \$4; owner or manager and over five clerks, \$6. Additional license of \$1 each is required where a store handling more than one classification is in competition with a store handling one of the same lines exclusively in the same municipality, village, town or city. In all cases delivery boys are exempt when the number of clerks is reckoned.

Hon. W. A. Fallow, Minister of Public Works, has been inspecting the roads in the southern part of the province and has announced that construction of standard market or secondary roads forms part of the government's highway program. He told interviewers that the government was trying to get farmers to agree to keep the roads in condition when once they are built.

"If farmers in a municipality will get together and agree on where the road is to be, and build it with screened gravel, the provincial government will assist them financially and then maintain the road after it is finished by sending patrol graders to keep it surfaced," the minister declared.

Some considerable relief was felt here when it became known this week that the exemptions from the new sales tax were issued by Hon. J. W. Huggill, acting premier, showing the list to be more numerous than was at first expected. Exemptions include most of the primary necessities of life, many of the prime needs of industry, most foods, agri-

cultural needs, many of the secondary needs in conducting business and all commodities sold for consumption or use outside the province.

Some discussion has been heard in the capital over the probable date for the coming Edmonton by-election and two dates have been mentioned as likely, June 15 and June 22.

An interesting point came up for explanation during the week in connection with the administration of the codes in retail merchandising. At the request of a Vancouver tea packing firm it was stated that manufacturers' premiums will not be affected by the new provincial regulations. Housewives therefore will still be able to get their premiums and use their coupons issued with their favorite food products as in the past.

Hon. Charles Cockroft gave assurances during the week that investment dealers and bondholders will be given proper notice before the Alberta government takes steps to proclaim the new compulsory refunding act, which gives the government power to refund the entire provincial debt of more than \$160,000,000 at lower rates of interest. This assurance was given to a delegation of Edmonton bond dealers who waited on the provincial treasurer.

Hon. C. C. Ross, Minister of Mines and Lands, has been busy in Ottawa for the past month, where he went at the suggestion of the legislature to attend the Canadian Institute of Mining and Metallurgy convention. He is reported to have been active in securing new investments by eastern interests in Alberta developments. Mr. Ross is regarded in some quarters as the best card in the hands of the administration and his selection for his present portfolio as one of the most encouraging things Premier Aberhart could have done.

His work in developing the province's resources is expected to be a large factor in keeping the wheel of progress turning, no matter what political stripe the government may wear.

Junior Board of Trade Organized at Enthusiastic Meet

Organization of a Junior Board of Trade was effected at a well attended meeting held in the Town Hall on Thursday evening. Stafford J. Boyd, president of the Lacombe Board of Trade, officiated as chairman and G. E. White was elected temporary secretary.

Election of officers resulted as follows: President, John S. Cram; first vice-president, Lawrence Campbell; second vice-president, Jack Morrison.

The following were elected as chairmen of various committees with power to choose two others to act with them on each committee: Roads and transportation, George Brooks; agriculture, William Douglas; entertainment, H. A. Law; agenda, H. D. Smith; publicity, H. Edgar Todd; health and sport, Len Douglas; membership and subscription, Gordon C. Sweet; civic administration, W. A. Swanson—the latter selected M. An Wassenhove and Norman McLaurin to act with him. F. M. Layton was chosen by the executive to act as secretary-treasurer.

A hearty vote of thanks was tendered Mr. Boyd for his assistance and the new president took the chair. The constitution and bylaws of the Red Deer Junior Board of Trade were accepted with the following amendment: That the executive have power to accept for membership anyone over the age of 35, if they desired. Ten members will be accepted as a quorum and the fee will be 50c, or \$1.00, the latter sum to include a banquet ticket. The date of the fiscal year is to be decided in the fall.

Committees were appointed to investigate and draft resolutions concerning a Clean-Up Week, Wednesday half holidays during May and 10 o'clock Saturday night closing for all stores. A banquet within the next two weeks is also being considered. An executive meeting was set for Monday night, April 20.

EARLY PIONEER PASSES AWAY

Angus French, one of the early pioneers of the Lacombe district, passed away at the University Hospital, Edmonton, late Thursday night, April 6, following a short illness.

Mr. French was born in Muskoka, Ont., in the year 1863. He lived for some time in Minnesota, U.S.A., and came to the Lacombe district about 42 years ago.

He is survived by his widow, two daughters, Mrs. J. Paul of Haynes and Mrs. W. J. Garvin of Botha; one son, William, of Vancouver, and eight grandchildren. A brother, Gordon French, resides at Armstrong, B.C.

Funeral services were held from St. Andrew's United Church, Lacombe, on Monday afternoon, April 20, Rev. R. B. Layton officiating.

NEW FORD SEDAN GIVEN AWAY

With a luxurious new Ford V-8 sedan given to the fortunate ticket holder, the Lacombe Hockey Club are holding a dance on June 19th at the Central Alberta Sales Pavilion. Each ticket entitles the holder to two admissions to the dance, and the possibility of drawing the lucky number. Only 1500 tickets will be sold and reports show they are going fast. The car will be on display at the dance, when the drawing will be made in public and the winner will drive it away.

BLACKFALDS HOLSTEIN SETS GOOD RECORD

H. and C. P. Elwell, Blackfalds, Alta., own the Holstein cow, Tamara Desdemona Colantha, that recently completed an R.O.P. record of 10,389 pounds of milk and 370 pounds of butterfat in 365 days.

Canadian exhibitors, compared with 124 prizes won in 1934, indicates the progress made during the past year.

F.E. McLeod

MEN'S HIGH TOP BOOTS, \$6.75

A Shoe for lasting satisfaction. Built for strenuous farm wear. The uppers of Brown Grain Leather. Plain flexible toe. Full bellows tongue. Thick Leather Soles are sewn and nailed. Sizes 7 to 10; 16-inch top.

BOYS' STRONG BOOTS, \$2.75

Lots of wear built into these rugged Boots. The uppers of Elk finished Black-Kip Leather, with toe cap. Stout Leather Outsoles and Insoles. Sizes 1 to 5.

SPECIAL

MEN'S WORK BOOTS, \$2.85

A clearance of odd lots. They're good strong Boots. The uppers of Black Leather, with soles of Leather or Composition. Sizes, only 7 to 9.

MEN'S WORK SHOES, \$3.50

ONE OF THE BEST
 The uppers of full Retan Leather, Brown or Black. Solid Leather insoles; Oak bend soles. Outside or inside counter as desired. Plain toe or with toe cap. Full fitting. Sizes 6 to 11.

MEN'S BLACK OXFORDS, \$2.95

It's time for Spring Shoes. . . and these serviceable Oxfords of Black Calf finished Leather are good value Shoes. Leather Soles and Rubber Heel Tips. Sizes 6 to 11.

MEN'S KIP LEATHER BOOTS

Clearing Price, \$2.95

Dress Boot Style and Work Boot Service. . . a medium weight everyday wearing Boot. Leather Soles and Heels. Sizes 6 to 10.

The New Spring Footwear

MODERATELY PRICED, DEPENDABLE QUALITY SHOES. STYLES TO SUIT YOUR PERSONAL NEEDS.

Men's Work Shoes of Quality

And quality counts when you buy Shoes that have to stand the strain of everyday wear on the farm. It's Economy to buy good Shoes.

MEN'S WORK SHOES, \$3.95

WITH RIVETTED STEEL ARCH

Best quality Brown Retan Leather Uppers; No. 1 Oak Bend Soles (the best part of the hide). Outside counters for greater comfort and wear. Solid Leather Heels. Full fitting combination last assures comfortable fit and foot support. Sizes 6 to 11.

MEN'S BLACK CALF OXFORDS, \$4.00

A good looking and good wearing dressy Oxford. Medium toe, blucher last. Goodyear welted leather soles; rubber heels. Sizes 6 to 11.

BOYS' BLACK OXFORDS

\$2.50 and \$2.75

Dressy styles for boys. Smooth finish, strong leather uppers and sewn leather soles. Sizes 11 to 13 and 1 to 5.

WOMEN'S SPRING FOOTWEAR

A WIDE RANGE OF SMART NEW STYLES

\$3.95

Colonial Pumps, Two Eyed Ties, Straps, Oxfords, Sports Oxfords. . . Shoes in this range to satisfy most any woman. Low heel walking Shoes, Cuban heel dressy Shoes and high heels for party Shoes. Sizes 5 1/2 to 8.

SPRING SUITS AND COATS

\$9.95 to \$20.00

A smart style group. . . The newest in woollen weaves, expertly tailored, fashionably styled. Sizes 12 to 42.

WOMEN'S SPRING FROCKS

Saturday Clearance, \$2.00

Smart Crepe Frocks in daytime and party styles. They're all new styles. . . and many at Half Price or less. Sizes 14 to 20.

NEW CURTAINS AND CURTAIN NETS

Ruffled Curtains as summery as a muslin frock; Curtains in a soft, creamy shade, with figured insertion. Frills are rayon stitched in Rose, Gold and Green. They have a deep valance and tie-backs.

Pair, \$1.25

RAYON CURTAIN NET

Yard, 65c

Honey Colored Net in a lovely all-over pattern, with scalloped selvage. A beautifully finished Silk Net. Yard wide.

KITCHEN SETS

Set, 69c

You will surely think them attractive. Rose, Green or Gold trimmings. Ruffles on the top curtains match the bands on the sash curtains.

World's Largest Telescope May Shed New Light On Riddle Of The Universe

Astronomers estimate the new 200-inch telescope using the great mirror will double the distance man can see to some 3,000,000,000,000,000 miles.

It is expected to bring into view 100 million galaxies like the one the earth's solar system moves in; to shed new light on the riddle of what the universe is doing, and perhaps to solve the intriguing question of whether there is life on Mars.

Theoretically, but not practically, the mammoth telescope will be powerful enough to show a skyscraper on the face of the moon or to spy across the country into the windows of the capitol in Washington.

The big sky-eye is being erected atop 6,000-foot Mount Palomar in the clear-air San Diego mountains near the Mexican border. San Diego, nearest big city, is 129 miles away, assuring that there will be no bothersome ground lights.

California Institute of Technology is the builder, aided technically by Mr. Wilson, astronomer, whose 100-inch Hooker telescope the new giant will succeed as the "world's largest."

Upon completion some time after 1940, the telescope will become science's largest and costliest tool. The great mass will weigh some 500 tons. The expected cost has not been estimated, but guesses of various scientists range from \$2,000,000 to \$3,000,000.

The "great eye," the mirror to be delivered by a New York state glass works, is the heart of the new instrument.

For four years the big chunk of pyrex, nearly 17 feet across and 23 inches thick, will be whittled under a grinding tool inside a cork-lined, air-conditioned "laboratory." For all its 17 tons, the glass will be handled easily as a round of cheese by a 10-ton grinding machine, bulking 40 feet long and 30 high.

Some time in 1939 or 1940 the glass will have been ground to a perfect parabolic curve and will be given a coating of aluminum. The mirror will then resemble a giant shiny saucer, with a hole in the center.

Mounted at the bottom of a 55-foot steel tube balanced so delicately as to move almost at a finger's touch, the mirror will begin its job as a "great eye" some 360,000 times as effective as a human eye.

Contrary to popular belief, the telescope will not magnify. The mirror will act as a "light funnel." All light reaching the 200-inch circle will be reflected inward, because of the curved surface, to a single beam small enough to enter the eye.

A distant star's image reflected to this point of focus will be bright and sharp. Subsequently this image then may be magnified greatly through a set of lens without becoming fuzzy—a process as photograph by a high-powered camera may be enlarged more than one from a cheaper one without losing its distinctness.

Distortion caused by the earth's atmosphere limits the degree of magnification possible. Thus, though the telescope theoretically is powerful enough to show up two bright spots 30 feet apart on the face of the moon, this power cannot be realized.

Further, astronomers will not waste time pointing the 200-inch giant at the moon and other nearby objects well within smaller telescope's range. The new instrument will pick up where the present world's largest telescope leaves off.

Present limits of the Mt. Wilson telescope is 1,800,000,000,000 miles, where Dr. Edwin Hubble has glimpsed far-off nebulae. Mt. Wilson astronomers estimate the 200-inch telescope should double the range of the 100-inch instrument.

Astronomers using the new telescope at direct focus will perch in a carriage-shaped carriage in the middle of the 55-foot tube near the top. They will look directly down at the mirror.

Under other arrangements, a small mirror, instead of the astronomer, will be placed at the end of the tube. The mirror will reflect the star images back through a hole in the center of the "great eye." In another type of focus, a mirror placed at a 45-degree angle will reflect the light off to one side.

Astronomers will do little direct "seeing." Most of the work will be done photographically. A camera, for plate exposed to the reflection from the "great eye" for hours will pick up dim stars and nebulae that a direct visual observation would miss. The developed photographs are studied under microscopes later.

Industrial chemists are responsible for many of the present "aid to beauty," including artificial silk, synthetic leather shoes, face powder, artificial teeth, and coloring matter for lipstick and dress materials.

Sulphur Needed In Soil

Alberta And Saskatchewan Save Millions Of Acres From Aridity

Alberta and Saskatchewan have grown by many millions of acres during the past few months; at least the area of useful agricultural land has grown. It happened because an experimental station had some scabby potatoes. The curious story is told in an article by Dr. J. D. Newton, professor of soils at the University of Alberta, writing in the latest issue of Scientific Agriculture. Professor Newton is one of the famous family that has been so prominent in agricultural research in Canada.

In northern Saskatchewan and Alberta are millions of acres of gray bush soils that produce poor crops. The gray bush soil and one is rewarded with an extra ton of clover hay. The yield is doubled or trebled. And the discovery was made because some potatoes were scabby and started experimental work.

The gray bush soil is the largest of the great soil zones of Alberta, but is still rather sparsely settled. In Saskatchewan, the northern tract during the drought years carried some 40,000 people from the prairie to this type of soil.

Professor F. A. Wyatt, in charge of the Breton experimental station, finds that when legumes have been successfully grown with fertilizers on the gray soil, "the crop yields become of the same order as those obtained from the black soils."

The threatened territory is a band of country about 70 miles wide running north from the international boundary, flanked on the west by the Rocky Mountain foothills to a point north of Calgary, where it turns east toward the Saskatchewan boundary.

More People Live To Middle Age Than Formerly

Dr. Alexis Carrel said in Los Angeles that a middle-aged man today has a smaller chance to live to be 80 than his grandfather did. He thinks that our resistance to fatigue, to sorrow, to worry, has been decreasing. But it is an essential part of the argument to regard the new baby to-day has a much better chance to become a middle-aged individual than he had 100 years ago.

One reason for an increase in the so-called degenerative diseases which reap their harvest in middle age is that the first fertile soil in the west army of individuals which formerly never would have grown up. Modern progress keeps them alive into the fifties. Beyond that they cannot make the grade.

Louis J. Dublin and Alfred J. Lotka in their book "Length of Life" estimate that in the Roman Empire a baby's expectation of life was between 20 and 30 years. It was perhaps a bit higher in London at the end of the seventeenth century. One hundred years ago in England it was 40 years. At the beginning of the present century it was, both in England and this country, 48 years. In the United States to-day it is 56 years for little boys and 62 years for little girls.—New York Times

Noise Abatement

New York To Put The Clamp Down On Noise-Makers

New York city's voluntary anti-noise campaign, now six months old, is headed toward a status of legal compulsion. Alderman Murray St. Clair has introduced a comprehensive noise abatement ordinance to the board of aldermen to give police effective enforcement powers in curbing automobile horns, radios, steam whistles, vehicle loading noises, peddlers' cries, loud speakers, and "noises caused by animals," among many others.

Experiment With Frozen Fish Dr. J. Satterly, professor of physics at University of Toronto, placed two goldfish in liquid air at 300 degrees Fahrenheit below zero. When he took one out and hit it with a board, the fish jumped into the water. He placed the other in water to thaw. When the fish thawed out it swam about.

Through Vancouver Port More than 11,000,000 bushels of grain were exported from Vancouver during February, the largest monthly figure in several seasons. This brings the total shipments to date this season to 31,322,893 bushels compared with 29,406,762 bushels at the same time last year.

It has been estimated that the Sahara Desert is expanding at the rate of one mile annually.

Let In Numbers An Englishman, an Irishman and a Scotman were having lunch together.

By the way, did either of you go to Smyth's wedding?" enquired the Englishman. "I wasn't able to go, but I sent him a dinner service set for twelve people."

"I wasn't there either," said the Irishman, "but I sent a tea set for 24 people. Were you there, Mr. Tavish?"

"No, I couldn't get there, but I sent him a pair of sugar tongs for a hundred people."

At Croydon airport, near London, in foggy weather, a balloon with instruments attached is sent up two or three thousand feet to test flying weather over the field.

Hopper Scourge

Best Outlook In West For Three Years, Says Report

The Department of Agriculture reported the best outlook for three years in the war against Canada's midwestern grasshopper scourge. Conclusions based on a recent survey by its entomological division, the department said, are that the total area threatened with grasshopper infestation this year is 12,000,000 acres less than the area affected last year.

It said outbreak prospects in Manitoba were reported slight, due to widespread destruction of the insects last year. The provincial agriculture department does not consider an organized anti-hopper campaign necessary this summer but will stand ready to jump into the fight against local concentration as required. The threatened area this year is about 1,000,000 acres compared with 3,500,000 last year.

One severely infested area lying in the Red River valley at the extreme southwest corner of the province contains about 28,000 acres. It is the only danger spot indicated now.

Saskatchewan, the survey indicated, may have serious local outbreaks, but its total infested area has dropped from 16,000,000 last year to 10,000,000 estimated this year, while the threatened areas are expected to shrink from 8,700,000 to 900,000 acres. Areas indicating severe infestation have shrunk from 950,000 acres last year to 47,000. Most severe outbreaks are expected in the northwest, west and south of Saskatchewan, and in some central and southern areas.

In Alberta the picture is less bright and the threatened outbreak, the department said, will approximate that of 1935. The survey indicated decline in the "very severely" threatened area from 13,000,000 acres to 140,000, however, and the drop in "severely" threatened areas from 13,000,000 to 450,000. Nevertheless the infested area has dropped only about 4,000,000 or 5,000,000 acres.

The threatened territory is a band of country about 70 miles wide running north from the international boundary, flanked on the west by the Rocky Mountain foothills to a point north of Calgary, where it turns east toward the Saskatchewan boundary.

Have Better Chance

More People Live To Middle Age Than Formerly

Dr. Alexis Carrel said in Los Angeles that a middle-aged man today has a smaller chance to live to be 80 than his grandfather did. He thinks that our resistance to fatigue, to sorrow, to worry, has been decreasing. But it is an essential part of the argument to regard the new baby to-day has a much better chance to become a middle-aged individual than he had 100 years ago.

One reason for an increase in the so-called degenerative diseases which reap their harvest in middle age is that the first fertile soil in the west army of individuals which formerly never would have grown up. Modern progress keeps them alive into the fifties. Beyond that they cannot make the grade.

The SNAPSHOT CLUB PAINTING WITH LIGHT

When lights strike from the same distance on either side the result in a photograph (left) is a balance that tends to "flatten" the subject. In the other picture, the light comes from the extreme left and the extreme right a little to the rear. The dramatic, three-dimensional effect is obvious.

Skillful photographers use light in place of the artist's brush. For with light they can create sharp contrasts, accents and shadows; undesirable features can be eliminated, important points played up.

Above are two pictures showing how a subject may be "painted" by light. The figure and the camera were kept in fixed position; only the lights, two of them, were moved. And see what happened! The flat, uninteresting representation at the left is, at the right, transformed and enlivened. Form and features have been brought into relief in dramatic fashion. The paths in the pose and expression have been brought out, and an impression of mystery has been introduced. The picture now speaks and stimulates the imagination to a much greater extent.

For the amateur, there is a world of fun experimenting with light painting. Figures like this, dolls, toy animals, glass globes, spectacles, mirrors, bottles, vases, indeed any small objects that appeal to your fancy, singly or in group, may be used as subjects. The top of a table will serve as your "stage." A portrait attachment for the ordinary camera is essential, because the pictures must be made at close range in order to get a large image. Behind or on the table arrange to have a plain background, dark or light, depending upon the tone of your subject.

Lock Ness Monster

Visitor To Scotland From Manitoba Alleged To Have Seen Strange Creature

Allan Chisholm, former mayor of Morris, Man., witnessed the first appearance this season of the famous Loch Ness monster, according to a story in the London Daily Mail. The newspaper's dispatch, from Glen Urquhart, Scotland, quoted Chisholm as saying: "I only arrived in my native Glen a few days ago. I have been sceptical of the existence of the monster. All doubt has now vanished. I am certain that in the loch is a creature very large and mysterious."

Chisholm was motoring to a point above the loch with his niece, Marjorie McKenzie of Douglas Row, Inverness, when they saw a large creature emerge from the water near Inverness. The Mail dispatch said: "Inverness is a village on the opposite side of the loch."

"The creature was about 300 feet long," said Chisholm. "It neck protruding with a giant resemblance to a rhesus monkey in action. The neck and the greater part of the head apparently was flabby or covered with matted hair. The beast remained on the surface more than two minutes."

If the entire period of the earth's existence were represented as one day of 24 hours, man, in his present form, would have lived only during the last minute, say biologists.

The former kaiser became emperor of Germany at the age of 29.

Soviet workers are boring an oil well on the sea bottom in the vicinity of Baku.

Cross Stitch Makes Gay Linens

Gay as a lark!—this peasant lassie, who will put a song in YOUR heart, too, as you embroider her picturesque costume (each day a different scene) on a set of seven tea towels. Done mainly in cross stitch, single and outline stitch, you'll use gay bits of cotton floss, this way.

In pattern 5445 you will find a transfer pattern of seven motifs averaging about 5 1/2 x 8 inches (one for each day of the week); material requirements; color suggestions; illustrations of all stitches needed. To obtain this pattern send 20 cents in stamps or coin (not preferred) to Household Arts Dept., Winnipeg Newspaper Co., 170 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Exploration Work Carried On In 1935 Leads To Many Outstanding Discoveries

One Important Industry

Revenue From Manufacturing In Canada Runs Into Billions

Although Canada is perhaps best known throughout the world for its products of the field, forest, and mine, manufacturing is a most important industry.

Manufacturing enjoyed rapid growth in the early years of the century, partly due to the development of the western provinces. The influence of the Great War upon the manufacturers of the Dominion was profound and far-reaching, leading to the diversification of products and production at home of many commodities previously imported. Enterprising manufacturers made use of their opportunities when the importation of manufactured goods from Europe practically suspended, and added to this was the effect of the great prosperity of agriculture produced by unprecedented war-time prices. The great boom in Canadian manufactures reached its height in the summer of 1929.

Statistics for that year showing a gross value of products which was not exceeded until 1929. The 1929 values were higher, although prices had dropped 41 per cent. in the intervening period. In 1935 the output of the Canadian manufacturing industries was \$470,000,000. In 1910 it passed the billion mark, in 1920 it was 3 1/2 billions, and in 1929 it went over four billions. Then came the depression and by 1933 the value of production had dropped down to two billions. Since then there has been a recovery. It is expected that 1935 figures, when available, will show an appreciable improvement over 1934, but there is no prospect that they will approach those of 1929 or 1929.

Machine Has Many Uses

Taking Guesswork Out Of Mining Is One Feature

Twenty years of research and experimentation, and the outlay of \$50,000, has given birth to a machine which is asserted will take much of the guesswork out of mining, make salvage work a push-over, pare down the percentage of jailbreakers, and remove the profit from smuggling.

It was demonstrated in Edmonton recently before Major-General Sir James MacBrien, R.C.M.P. commissioner, and others.

Built something like a radio, it weighs 14 pounds and, it is claimed, can determine the location of precious metals and magnetic bodies through 500 feet of overburden or rock; register to within 5 per cent. the depth of the vein; differentiate between gold, silver, radium, platinum, chromium, copper, iron; locate narcotics, concealed weapons; find sunken cargoes and register the length, width, depth and closest outcropping of sulphide ores.

In hospitals it can locate shrapnel and bullets in patients. In penitentiaries it can spot axes, files and guns on prisoners. On board ship it can locate secret hiding places of narcotics. Its sponsors claim.

When approaching metal, the machine sings a whiney song.

Early Art Discovered

Medieval Carvings Uncovered During The Process Of Cleaning

Striking discoveries of medieval art have been made in the cloisters of Norwich Cathedral, London, which are undergoing cleaning and restoration under the supervision of Professor H. E. Armstrong.

The work which has now been brought to light dates from the early part of the fourteenth century, often regarded as the finest period of English art.

It includes some exquisitely human carvings, notably a portrayal of musicians.

A magnificent boss of the Crucifixion, the beauty of which had previously been hidden beneath the grime of centuries, has been revealed in one of the bays.

Another representation of St. John has been discovered on the east wall. It is almost perfect and is very unusual in that it shows the Apostle as an old man.

Cleaning of the northeastern bay, combined with the great doorway into the cathedral, was undertaken by the friends of Norwich Cathedral and revealed great beauties, both in the doorway and in the vaulting.

Had No Insurance Although Hartford, Conn., is the insurance capital of America, a checkup of insurance companies indicated that virtually none of the torrent-swept Hartford area was covered by flood insurance. This condition also was true for much of the flood-battered East.

Although snakes rarely poison each other with their bites, two black-tailed rattles at the University of Arizona recently bit each other and were both dead about six hours later.

CANADA'S FARM POPULATION

Of the 10,362,833 people who form the population of Canada, exclusive of the Yukon and North-West Territories, 3,289,507 or 31.7 per cent live on farms. The rural population of Canada at the last census numbered 4,792,135, of which 3,289,507 or 68.7 per cent live on farms and were presumably engaged in farming. The remainder, 1,502,628, represented the rural population which did not live on farms—usually in small hamlets or other unincorporated villages.

MIRACLE PLAY MUCH ENJOYED

The miracle play, "God So Loved the World," put on by St. Cyprian's Girls' Branch of the W.A. on Wednesday evening, was a reverent and beautiful interpretation of the resurrection theme. This production was preceded by a short talk by the Rev. W. H. Cripps of Red Deer on the origin and nature of miracle plays, in which Mr. Cripps stressed that their main object was to bring home to us more forcibly the life of Christ, and that in the Middle Ages miracle or mystery plays always were held in some setting suitable to their purpose, such as the grounds of a cathedral.

Outstanding in their characterization were Phoebe Brewer as the Blessed Virgin Mary, Basil Godfrey as St. John, Patricia Henly-Lewis as Mary Magdalene and Arthur Brewer as a young boy.

With costumes reminiscent of the far East and effective settings, the atmosphere of the Holy Land was sustained throughout. Beautifully sung hymns at appropriate moments contributed still further to the religious nature of the play. The production culminated in a scene depicting worshippers of all nations kneeling before an altar, while the curtain closed after the priest had pronounced a blessing on the people.

With the present revival of miracle plays, it is unfortunate that inclement weather prevented more people from attending a production which in its simplicity and distinction, gave such a worthwhile conception of the medieval method for diffusing religious knowledge. In any event, the St. Cyprian's Girls' Branch, and their director, Mrs. Henly-Lewis, are to be commended for their very fine presentation of "God So Loved the World."

Recounts Missionary Activities

Mrs. Arthur Newman recounted some of the more interesting events of her missionary activities in Alberta in a short talk to members of the Women's Missionary Society at their regular Spring Thankoffering meeting on Wednesday evening. Mrs. John MacDonald and Mrs. G. P. Johnston sang solos, which were greatly enjoyed. A pleasing part of

the program was the re-affiliation with the W.M.S. of Mrs. N. McLearn's C.G.I.T. Group. Others taking part in the program were Mrs. U. E. Reeves, president; Mrs. R. B. Layton, Mrs. Street and Mrs. C. E. Todd. Mrs. F. H. Reed assisted at the piano.

Fredericton, New Brunswick, has been chosen as the meeting place of the 1936 annual convention of the Canadian Seed Growers' Association, to be held on July 9, 10 and 11.
